

Importing PDF's into Foreflight

- UAS Pilots can add their own PDF documents into Foreflight, which is ideal for fire operation maps or other reference data.
- Specifically, ForeFlight accepts PDFs and image files (PNG, JPG, TIF, GIF).
- You can import files into ForeFlight by viewing a document in another app, like Safari, Mail, Dropbox or GoodReader.
- To import with IOS, navigate to the map you wish to import. Tap the arrow button, which will show an “Open in...” window, then choose ForeFlight.
- Alternately, files can be brought into ForeFlight by syncing your iPad with iTunes, although this isn't as easy.

- Once imported, click on map icon radial.
- Navigate to your map.
- Transparency mode of the map can be adjusted using the tool radial.
